

CYCLONE CLEAN TREATMENTS

BY
CYCLONE TECHNOLOGY

Cyclone Clean treatments, when paired with Cyclone Technology's water pressure machines, utilize adjustable low-or high-pressure settings and can even heat water to an impressive 160°F, surpassing all other options for a superior and optimal outcome. Our application process is simple, and our advanced technology helps prolong the lifespan of your hard surfaces.

Cyclone Clean Treatments are specifically formulated for

- ✓ Ease of Application
- ✓ Water-based and Water Soluble
- ✓ Non- Foaming and Low VOCs
- ✓ Biodegradable and Eco-Friendly
- ✓ Non- Caustic and Non- Flammable

Faster, Greener, Cleaner

Cyclone Clean Paint Remover is crafted from natural soybean ingredients and is biodegradable and non-toxic. The product safely softens and removes multiple layers of paint and coatings, allowing easy scraping or washing away. It penetrates the old coating to break the bond with the substrate instead of dissolving it. This process, known as delaminating, is safer to use and facilitates the easier collection of paint solids residue for an environmentally friendly clean-up and disposal method.

Cyclone Clean Asphalt Bleed Remover is a concentrated, specialized water-soluble cleaner designed to remove excess asphalt bleeding by combining high-pressure water blasting with restoring the surface to acceptable friction levels. Our Asphalt Bleed Remover contains ingredients that break down the molecular bonds of solvents, tars, oils, and other surface contaminants, making it easier to dissolve, soften, and remove. It is 100% readily biodegradable, non-toxic, and water-soluble. Asphalt Bleed Remover meets stringent environmental requirements while reducing costs and improving production.

Cyclone Clean Heavy-Duty Degreaser is a water-based product that quickly removes grease, oils, and other contaminants from surfaces. It is specifically developed to be used with Cyclone Technology heated pressure cleaning equipment to provide efficient and thorough cleaning while minimizing the risk of surface damage. This degreaser effectively removes oil, grease, and hydraulic fluids from concrete and asphalt surfaces. It can also be used effectively on equipment, steel, aluminum, titanium, and other surfaces.

Cyclone Clean Rubber Remover is a water-soluble cleaner designed to soften rubber, dirt, and grime on racetracks, runways, line markings, and all pavements, helping to restore friction. Our formula is made specifically for use with Cyclone Technology Hard Surface Pressure Machines, allowing facilities to maintain pavements to safe standards by using an eco-friendly cleaning solution.

Cyclone Clean High-Level Disinfectant Cleaner is a water-based, biodegradable formula designed to eliminate 99.99% of bacteria and viruses on surfaces. When used with Cyclone Technology pressure cleaning equipment that heats up to 160°F, it offers excellent disinfecting and cleaning results. The cleaner's active ingredients break down the cell structure of microbial pathogens, effectively eliminating them or rendering them inactive on surfaces.

Cyclone Clean Organic Growth Remover is a water-based formula specially engineered to quickly and efficiently remove and prevent mold, mildew, and algae from surfaces in exterior environments. This reduces the frequency of cleaning and maintenance, saving time and resources. Cyclone Technology's heated pressure cleaning equipment works exceptionally well with it. It can be used on all surfaces, including concrete, asphalt, wood, brick, or vinyl.

Available in 1, 5, 55 and 275 Gallon
